Egor Kosaretsky

ML-Engineer and Bioinformatician

Moscow, Russia | egor@kosaretsky.co.uk | +7 (965) 141-15-43 | kosaretsky.co.uk

linkedin.com/in/egor-kosaretsky | github.com/Jahysama

SUMMARY

Machine learning engineer and Bioinformatician with over **three years** of experience in machine learning algorithms, biological data processing and analysis, Docker and K8s, ETL and CI/CD building with Python, R and Bash. As of August 2023, I will be available for full-time employment.

SKILLS

Probability & Statistics
Hidden Markov Models
Bayesian statistics
ANOVA

Programming skills
Python: **Pytorch**, NumPy, Pandas, Polars, scikit-learn, PyMol, SeaBorn, **SQLAlchemy**, Luigi, Snakemake, **FastAPI**, Plotly, Pytest
R: tidyverse, ggplot2, caret

Cloud and Databases
Google Cloud, Yandex Cloud, Docker, **K8s**, PostgreSQL, **Airflow**, Luigi, Hadoop, **Spark**, Mlflow, Linux, **bash**

EXPERIENCE

DevSect | Machine Learning Engineer — Russia, remote | **04.2023 - Current**

- Communicated with Frontend developer, project manager, and CEO to find and research possible new AI features for existing apps.
- Reverse-engineered and deployed standalone microservices for facial expression, Text2Speech and Speech2Text generations.
- Developed services integration increased user app retention by 12%.

GENXT | Bioinformatician Data Scientist — UK, remote | **09.2020 - 04.2023**

- Collaborated with 3 other data scientists, CTO, and project manager to identify performance and output quality genetic data relatives finding pipeline improvement opportunities. Helped Senior researchers to find possible downsides of the Federated learning approach.
- Refactored major parts of the code for parallel data processing and added several new flows for large-scale data analysis. Covered the code in tests and assisted in CI/CD workflow development. Conducted EDA and PCA analysis on genomic data and fine-tuned several boosting models, contributed to the internal MLOps development environment.
- Increased pipeline speed more than 2 times, which allowed it to be integrated in another genetic company's workflow. Large data analysis capacities proved to be a useful tool in marketing it to big genetic companies. Federated learning in genomics research concluded in a paper and successful proof of concept B2B product.

EDUCATION

Lomonosov Moscow State University | Bioinformatics — Moscow, Russia | **2018 - 2025**

- Worked at protein research labs, and studied digestive protein active and binding sites.

Relevant Coursework: Probability theory, Intermediate Python, Statistics with R
Additional Courses: Max Max Delbrück Center for Molecular Medicine: ML for Genomics

PROJECTS

Open source AI multimodal Vtuber
Automated and fully open streamer.

Genetic Potion
Genetic algo that improves the performance of boost and tree models.

Snakemake workflow management system
Active developer and contributor.

LANGUAGES & INTERESTS

Languages: fluent: English, Russian, German**; basic:** Japanese
Interests: Tactical tabletop games, Indie game dev, Wildlife biology, Open source software
